

## **IMPORTANT – PLEASE READ**

**Warning: These are very weighty windows and will take some lifting; we would highly recommend the fitting of these products to be completed with at least two fitters.**

**DO NOT** remove the inner/opening unit of the hopper windows for fitting as the main frame may warp when fitted to the hull of the boat. If you remove any inner parts keep a note of its corresponding main frame, number references can be found on the top edge of all the windows.

If your steelwork is warped and not flat then this may twist the main frame once screwed to the steelwork and make the inner/opening pane a tighter fit in areas.
